Playstation Dualshock 4 controller instructions

Connecting the controller to a console

Turn on the Playstation 4 or 5 console.

Plug the smaller end of the included Micro USB controller into the Dualshock controller and the larger end into your console.

While connected like this, press the Playstation (PS) button on the controller.

A beep from the controller and its light changing from orange to white indicates the pairing process is ongoing.

The light bar on the controller should turn blue when properly paired (connected).

Once the controller is paired, you can remove the Micro USB cable from the controller and the Playstation console and use the controller wirelessly.
